MEDICAL EQUIPMENT

Packaging for medical equipment

Today's medical devices are very sensitive and sophisticated, and this is why it is necessary to protect them well during transport, mainly from mechanical damage. One of the most effective methods of packaging are non cross-linked PE foams designed with the maximum protection of the packaged device, as their priority. The external layer is usually made from corrugated cardboard. A part of this packaging can include various internal boxes with accessories, filled also with PE foam or PU foam.

This segment often uses cases with various types of PE and PU foam fixtures for packaging. This packaging option is often used for packing smaller diagnostics and medical devices or for presentation purposes.

INTEROBAL[®]

LEADING PRODUCER OF TRANSPORTATION AND STORAGE PACKAGING

Production range

- Constructive packaging
- Transportation and storage packaging
- Processing corrugated polypropylene
- Plastic and aluminium cases with inlays
- Technical parts and seals
- Production of profiled PU elements
- Storage packaging with non-woven textiles

Development

- Our own development centre
- Comprehensive packaging solutions
- Production of prototypes
- Bespoke packaging solutions
- Testing and transportation tests
